

# CHARLIE CARP

Good dead. Dead good.

## GRAPES

**Charlie Carp is a perfect fertiliser for wine or table grapes. Not only does it provide a high level of macro and micro nutrients in liquid form, the natural oils from the carp can help in the control of insect pests and powdery mildew.**

Independent trials have shown that by applying Charlie Carp fertiliser, vines show increased growth and vigour resulting in increased grape berry size.

By using Charlie Carp fertiliser you are not only improving productivity, you are also helping to clean up the environment by ridding the waterways of European Carp.

### APPLICATION RATES

#### **Spray**

Mix Charlie Carp 1:10 with water, e.g. 100ml to 1 litre of water. 1 litre of mixture will treat approximately 10 metres of vines. Avoid spraying during heat of the day.

#### **Watering Can**

Mix Charlie Carp 1:100 with water, e.g. 90ml : 9 litres of water. Pour over foliage. 9 litres of mixture will treat approximately 10 metres of vines.

#### **Drip**

Inject mixed Charlie Carp solution (1:100) into fertigation system in last hour of cycle.

#### **Ground**

Inject 1 litre of mixed Charlie Carp (1:100) at base of vine, approximately 20cm from trunk. Follow up with drip irrigation if possible.
