HOW CAN YOU GUARANTEE A PRODUCT IS TRULY ORGANIC?

It is very easy to put the word organic onto a product these days - but it is very hard to get past the rigorous testing of associations such as NASAA.

NASAA stands for the National Association for Sustainable Agriculture of Australia. Their logo is becoming more recognisable in our industry. It is only when this logo is displayed (or that of the BFA - Biological Farmers Association) that you can be truly assured that the product is indeed certified organic.

ORGANIC RANGE

Charlie Carp Organic is the ideal natural commercial alternative, ideally suited to crops in areas of high value added horticultural production. There is an increasing demand for organic and bio-dynamic foods and Charlie Carp offers the producers of those crops the opportunity to capitalise from the increasing demands and margins that are being achieved in these specialised areas.

Charlie Carp will provide young plants with improved growth rates and therefore healthier plants this means better yields and therefore better returns. Charlie Carp Organic Fertiliser and Soil Conditioner has been formulated to improve both the growth and quality of your commercial crop.

➡ WHY HAS CHARLIE CARP GONE ORGANIC?

As people's knowledge of the environment changes and grows, so too does our need to listen to our customer demands. More and more home gardeners are starting up the 'backyard vegie plot', permaculture is on the rise; and people are becoming more conscious of the products that they are using.

Now with Charlie Carp, not only are you ridding Australia's waterways of an introduced pest, but also you can be assured that we can now also offer you chemical-free gardening.

➡ SAFE TO USE

Trials were undertaken to determine the levels to which Charlie Carp can safely be used. At rates up to five times the recommended levels there were no signs of phytotoxicity.

➡ ADDITIONAL BENEFITS

Charlie Carp retains all the natural fish oils and fatty acids and there was some resultant evidence in the control of aphids, leaf miner and some other pests in commercial crops.

➡ INDEPENDENTLY PROVEN

All trials are independently conducted and reported by Dow Administration Pty Ltd.
