

CHARLIE CARP

Good dead. Dead good.

STONE FRUIT & OLIVES

Independent trials have shown that Charlie Carp fertiliser can improve yield and quality in stone fruit and olives.

Charlie Carp fertiliser applied correctly will aid your plants health and help condition the soil. Natural oils within Charlie Carp fertiliser act as a natural insect deterrent further increasing productivity. It can also help in the control of powdery mildew.

Charlie Carp fertiliser can be used as a foliar fertiliser through a fertigation system or ground applied.

By using Charlie Carp fertiliser you are not only improving productivity, you are also helping to clean up the environment by ridding the waterways of European Carp.

APPLICATION RATES

Domestic

Mix Charlie Carp 1:10 with water, e.g. 100ml to 1 litre of water. 1 litre of mixture will treat 2-3 trees. Avoid spraying during heat of the day.

Commercial Spray

Mix Charlie Carp 10 to 1 with water, e.g. 1 litre Charlie Carp to ten litres water. Apply to point of run off.

Drip

Inject Charlie Carp solution (1:100) into fertigation system in last hour of cycle.

Ground

Inject 1 litre of mixed Charlie Carp (1:100) at base of tree, approximately 20cm from trunk. Follow up with drip irrigation if possible.
