

CHARLIE CARP

Good dead. Dead good.

TURF

Charlie Carp fertiliser can be used in any turf situation.

Whether it is a golf course, sports oval, public gardens or domestic lawns, Charlie Carp fertiliser has the right nutrients at the right rates to help boost turf growth.

High levels of nitrogen and potash combined with essential micro nutrients will ensure turf is healthy and growing actively.

By using Charlie Carp fertiliser you are not only improving productivity, you are also helping to clean up the environment by ridding the waterways of European Carp.

APPLICATION RATES

Domestic (Watering Can)

Mix Charlie Carp 1:200 with water, e.g. 45ml of Charlie Carp to 9 litres of water. 9 litres of mixture will cover approximately 20m². Apply monthly during growing season.

Commercial Spray

Mix Charlie Carp 1:20 with water, e.g. 50ml to 1 litre of water. Apply at 100 litres per hectare monthly during growing season. This equates to 5 litres of Charlie Carp per hectare. An initial rate of 10 litres per hectare can be beneficial.

Not applicable in WA. (Charlie Carp Premium Organic Fertiliser is suitable in WA.)

Trials carried out by Dow Administration, Swan Hill
