

CHARLIE CARP

Good dead. Dead good.

VEGETABLE CROPS

Looking for a natural environmentally conscious fertiliser?

Charlie Carp fertiliser has a proven track record in improving productivity in vegetable crops. Independent trials have shown that up to a 15% increase in yield has been achieved by using Charlie Carp fertiliser.

Plant health will visibly improve with larger and darker foliage along with increased fruit size. Natural oils within Charlie Carp fertiliser help keep bugs and insects away as well as deter leaf diseases.

By using Charlie Carp fertiliser you are not only improving productivity, you are also helping to clean up the environment by ridding the waterways of European Carp.

APPLICATION RATES

Domestic – Watering Can

Mix Charlie Carp 45–90mls with 9 litres of water. A 9 litre watering can will cover approximately 10m². Apply to foliage and allow to run off onto soil.

Commercial Spray

Mix Charlie Carp 1:10 with water, e.g. 1 litre to 10 litres of water. Apply 100–200 litres of mixture per hectare. Avoid applying during heat of the day. Use large nozzles on boom spray equipment and remove final filters where possible. Agitate concentrate prior to mixing.
